

Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

VOL. XII. WASHINGTON, D. C., DECEMBER 3, 1897. No. 49.

UNITED STATES.

Circular letter relating to post-epidemic disinfection and aeration.

TREASURY DEPARTMENT,
OFFICE OF SUPERVISING SURGEON-GENERAL,
U. S. MARINE-HOSPITAL SERVICE,
Washington, D. C., December 1, 1897.

*To commissioned officers of the Marine-Hospital Service,
acting assistant surgeons, and State and municipal health officers:*

Referring to circular letter issued by this Bureau October 11, 1897, in which attention was called to the importance of keeping a record of the name of each person contracting yellow fever and the street and number of each house where yellow fever occurred, I have to state that inasmuch as the fever has disappeared in the South, it is now deemed necessary to begin the work of post-epidemic disinfection. In order that the same may be uniform and thorough in its character the following plan is recommended:

HOUSE TO HOUSE INSPECTION.

(a) The medical officer in command shall make, or cause to be made, house to house inspection of all infected localities and obtain complete lists (giving number and street when practicable) of all buildings, whether private dwellings, public houses, or hospitals in which yellow fever occurred or where suspicious disease existed during the past summer and fall, the city or town to be divided into districts.

(b) This inspection should be made by competent sanitary officers, under direction of the medical officer in command, and every part of the premises must be carefully inspected, including the rooms, basements, cellars, passages, closets, and garrets; the sinks, drains, cess-

pools, latrines, privies, or water-closets; the stables, sheds, outhouses, pens, etc.

(c) The inspection is not only for the purposes of disinfection, but also is intended to place each house and its surroundings in a perfectly sanitary condition, and includes the inspection of all streets, alleys, and byways.

(d) The inspection should include an examination into the water supply, and particularly as to the proximity of wells, cisterns, and springs to the privies, stables, pens, and other suspicious surroundings.

LIST OF YELLOW FEVER SUFFERERS AND SUSPECTS.

A complete list of all persons exposed to, or who may have contracted the disease, with the result in each case.

(a) If death resulted, where buried and under what precautions.

(b) If recovered or removed to another domicile in the same city, town, or place (or if departed from the neighborhood), ascertain all facts and make note of the same in order that it may be determined what action shall be taken in each case.

GENERAL DISINFECTION.

(a) It is recommended that after the inspection above provided for has been made, the medical officer shall designate a competent sanitary officer to perform the thorough disinfection and cleansing of all houses and premises which he may have decided require the same, said disinfection to begin as soon as practicable after the inspection referred to has been made in any locality.

(b) It is recommended that the removal of all refuse, garbage, and other deleterious matter be included in the work of disinfection, and that all articles of little value, such as old rags and other accumulations of worthless material, be destroyed, whether found in dwellings or "slop-shops."

(c) It is recommended that the inspectors inform all parties whose houses are visited, that no injury to their houses or contents will result from the disinfection contemplated, that even the most delicate fabrics can now be rendered free from contagion by a harmless process of disinfection, and that it is absolutely necessary for the protection of themselves and the community in which they live.

DISINFECTION OF HOUSES.

(a) The use of formaldehyd generators, or lamps, is recommended for the disinfection of houses and their contents. The details of their management for generating and applying formaldehyd gas should be fully understood by the sanitary officers in charge of the work.

(b) All the contents of the houses, including wearing apparel of every description, should be spread about the rooms; bedding or mat-

tresses not used by the sick should be placed upon the chairs or tables, or, better still, hung up in the yards and beaten; soiled bedding and mattresses used by the sick should be steamed or destroyed; trunks, closets, and bureau drawers, and all closed receptacles, should be opened and their contents exposed.

AERATION.

Both before and after disinfection the houses should be opened and thoroughly aired—"chilled," if the weather is favorable—and, later on, all the rooms, closets, etc., should be exposed to several hours of airing during freezing weather, and repeated at intervals during the winter.

DISINFECTION OF STABLES, PENS, ETC.

The use of bichloride of mercury solution, 1-500, or carbolic acid solution, 50 parts to 1,000 parts (applied by means of a spray), is deemed sufficient if all exposed surfaces are completely saturated. Privies may be disinfected by chloride of lime or strong solution of carbolic acid.

WALTER WYMAN,
Supervising Surgeon-General.

[Reports to the Supervising Surgeon-General United States Marine-Hospital Service.]

Yellow fever in the United States as reported to the Supervising Surgeon-General United States Marine-Hospital Service to December 1, 1897. (a)

a Yellow fever reported; cases not given.

No new cases of yellow fever in New Orleans on November 29.

[Telegram.]

NEW ORLEANS, LA., November 29, 1897.

No new cases and no deaths for the last twenty-four hours.

S. R. OLLIPHANT, M. D.,

President Louisiana State Board of Health.

Smallpox in Atlanta.

ATLANTA, GA., November 26, 1897.

SIR: I have the honor to submit the following synopsis of the existing smallpox at this place since Surgeon Sawtelle's last report: .

Total number of new cases since November 19, 1897.....	15
Discharged since November 19, 1897	1
Previously discharged.....	11
Death previously reported.....	1
Total number in hospital to-day.....	82
Total number in quarantine, suspects	35

This disease is almost wholly confined to the colored race, among whom vaccination is extremely difficult to accomplish, they evading the law in every possible manner.

Very respectfully,

J. M. CUNNINGHAM, M. D.,

Acting Assistant Surgeon, U. S. M. H. S.

Smallpox in the United States as reported to the Supervising Surgeon-General United States Marine-Hospital Service, December 29, 1896, to December 3, 1897.

CUBA.

Smallpox and yellow fever in Cuban seaports.

November 23: The United States consul at Cardenas reports that during the week ended November 20 there was in that city 1 death from yellow fever and no deaths from smallpox.

November 22: The United States consul at Cienfuegos reports that

during the week ended November 21 there was in that city 1 death from yellow fever and 1 death from smallpox.

November 27: The United States sanitary inspector at Habana reports that during the week ended November 25 there were in that city 9 deaths from yellow fever and 5 deaths from smallpox.

November 19: The United States consul at Matanzas reports that during the week ended November 17 there were in that city no deaths from yellow fever.

November 27: The United States sanitary inspector at Habana reports that during the week ended November 25 there were in the city of Regla 5 deaths from yellow fever.

November 22: The United States consul at Sagua la Grande reports that during the week ended November 20 there were in that city 37 cases and 6 deaths from smallpox.

November 20: The United States sanitary inspector at Santiago reports that during the two weeks ended November 20 there were in that city 5 deaths from yellow fever.

Sanitary report from Habana.

HABANA, CUBA, November 27, 1897.

SIR: The following report of the transactions of this office and of sanitary matters for the week ended Thursday, November 25, 1897, is respectfully submitted:

There will be many women and children leaving Habana for Key West and Tampa within the next few days, as the Florida State board of health will remove their restrictions governing the acclimation of persons on and after December 1, and being informed of this matter, this office has been besieged with persons to be vaccinated.

At the same time the harbor work has increased in proportion and the situation there has to be carefully watched as vessels remain two or three days after being given their bill of health by this office. In such cases an inspection is made of the vessel and crew each day and the inspection noted on the bill of health for the guidance of the quarantine officer at port of arrival in the United States.

Vessels in the cattle trade, and there are now seven regularly engaged in that business between Habana and ports on the west coast of Florida, should be, and are, carefully looked after even during the winter months.

The men composing the crews of these vessels nearly all present certificates of immunity to yellow fever, yet many of them own up that they have never had the disease and have lived in Florida, generally Key West, all their lives. I have a copy of one of these acclimation certificates, which, in my opinion, are unreliable. Yellow fever is decreasing in number of deaths, both in Habana proper and the town of Regla, across the bay. All of the deaths from that disease in the mortality table attached to this report occurred in the military hospitals.

The deaths from malarial fevers still hold up to the number which have occurred in previous weeks, and typhoid fever is still prevalent, most of the deaths from the latter disease occurring in the military hospitals.

Intestinal diseases are still ravaging the poor people, particularly the country people, although attempts are being made by private individuals to obtain for them good sustaining food and medical supplies.

Just what is and has been the condition of these people is exemplified by the fact that in the place called Los Fosos, mentioned in one of my previous reports, 1,700 men, women, and children have been placed there, and of that number, 1,190 have died. These figures are approximately correct, and the said deaths were recorded as resulting from enteritis or dysentery, and occasionally "inanición" i.e. starvation. The condition of these people has been improved during the last few days, owing, as I have stated, to the efforts of private individuals. Smallpox is again increasing, there having been 5 deaths from that disease during the week. One death has occurred from leprosy, and 1 from beriberi.

I would invite your attention to the reported epidemic of typhus fever at Matanzas. It is said that the disease exists to a considerable extent and is increasing rapidly, with an enormous death rate. I can not at this time verify the statement as to the true nature of the disease, but without doubt a malignant type of disease exists in that city, and I believe needs investigation. The city of Matanzas lies on a low plateau of ground, and is situated between two rivers. The waters of these streams being brackish, and with the lack of sanitary surroundings existing everywhere on the island, that city is probably infected with typhus fever. I would report positively the existence of an increasing epidemic of smallpox at Sagua La Grande, a town of about 12,000, in the province of Santa Clara.

On November 22, there were 35 cases in the "Lazaretto" and other cases scattered over the city, and no organized attempts have been made to stop the progress of the disease by vaccination, isolation of cases, and disinfection of premises, and this neglect has been so palpable that the paper of the town, *El Anunciador*, has published the condition of affairs.

Sagua La Grande is a port from which vessels go to the United States.

Smallpox is prevailing in epidemic form also in several towns in the province of Pinar del Río. The death rate is very high, the disease often occurring in its hemorrhagic form.

Pinar del Río is the province west of Habana, and the towns referred to are connected with this by a railroad.

Very respectfully,

W. F. BRUNNER,

Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,

U. S. Marine Hospital Service.

Mortality of the city of Habana and the town of Regla for the week ended Thursday, November 25, 1897.

*Sanitary reports from Santiago.*SANTIAGO DE CUBA, *November 13, 1897.*

SIR: I have the honor to inform you that there were 61 deaths reported for the week ended November 13. Of these, 3 were from yellow fever, 4 from tuberculosis, 12 from enteritis, 7 from pernicious, and 2 from remittent fever, 1 from dysentery, and 26 from dropsy; the rest from common diseases of noncontagious character. Yellow fever has decreased some, but as large contingents of raw recruits are arriving from Spain, I have no doubt that the endemic fever will take new force very soon. I must invite your attention to the large number of dropsies. These are cases of anæmia brought on by hunger and want.

Yours, respectfully,

H. S. CAMINERO, M. D.,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

November 20, 1897.

SIR: I have the honor of submitting the following report on the sanitary condition of Santiago de Cuba for the week ended November 20:

Sixty-six deaths have been reported for this period, of which 2 were from yellow fever, 3 from dysentery, 7 from tuberculosis, 9 from enteritis, 3 from pernicious, and 4 from remittent fevers, 23 from anæmia with dropsy, and the rest from common diseases of noncontagious character. Hunger seems to be the principal factor in the production of deadly maladies at present. A man was found dead from starvation right opposite the consulate this morning.

Respectfully,

Dr. H. S. CAMINERO,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

HAITI.

Yellow fever in Port au Prince.

DEPARTMENT OF STATE,
Washington, November 29, 1897.

SIR: I have, by direction of the Secretary of State, the honor to inclose copy of a dispatch from our minister to Haiti, reporting the presence of yellow fever at Port au Prince.

Respectfully, yours,

WILLIAM R. DAY,
Assistant Secretary.

HON. SECRETARY OF THE TREASURY.

[Inclosure—No. 77.]

LEGATION OF THE UNITED STATES,
 PORT AU PRINCE, HAITI, *November 10, 1897.*

SIR: I have been informed that yellow fever has broken out here. Two cases have occurred, one of which has resulted fatally. The government is taking energetic measures to isolate and stamp it out. I think there need be no cause of alarm. I view it simply as one of those sporadic cases that occur yearly; the germ is no doubt here only awaiting subjects to develop itself upon. Should it become epidemic, will inform

the Department. Am not alarmed myself. Will remain here to watch results. It would be well not to have any of our naval vessels in these waters until all apparent danger is over.

I have the honor to be, sir, your obedient servant,

W. F. POWELL.

HON. SECRETARY OF STATE, *Washington, D. C.*

STATISTICAL REPORTS.

BAHAMAS—*Dunmore Town*.—Two weeks ended November 19, 1897. Estimated population, 1,472. One death. No deaths from contagious disease.

Governors Harbor.—Two weeks ended November 20, 1897. Estimated population, 1,500. No deaths.

Green Turtle Cay—Abaco.—Two weeks ended November 18, 1897. Estimated population, 3,900. No deaths.

BERMUDA.—Two weeks ended November 20, 1897. Estimated population, 15,013. Total deaths, 4. One death from enteric fever.

FRANCE—*Roubaix*.—Month of October, 1897. Estimated population, 130,500. Total deaths, 153, including enteric fever, 4; measles, 1, and whooping cough, 3.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 33 great towns in England and Wales during the week ended November 13 correspond to an annual rate of 19.0 a thousand of the aggregate population, which is estimated at 10,992,524. The highest rate was recorded in Bolton, viz, 27.1, and the lowest in Cardiff, viz, 10.7.

London.—One thousand six hundred and sixty deaths were registered during the week, including measles, 78; scarlet fever, 20; diphtheria, 46; whooping cough, 25; enteric fever, 20, and diarrhea and dysentery, 21. The deaths from all causes correspond to an annual rate of 19.4 a thousand. In greater London 2,088 deaths were registered, corresponding to an annual rate of 17.3 a thousand of the population. In the "outer ring" the deaths included 26 from diphtheria, 16 from measles, 1 from scarlet fever, and 6 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended November 13 in the 23 principal town districts of Ireland was 19.9 a thousand of the population. The lowest rate was recorded in Queenstown, viz, 0.0, and the highest in Londonderry, viz, 28.3 a thousand. In Dublin and suburbs 133 deaths were registered, including enteric fever, 9; scarlet fever, 8; diphtheria, 1, and whooping cough, 2.

Scotland.—The deaths registered in 8 principal towns during the week ended November 13 correspond to an annual rate of 20.1 a thousand of the population, which is estimated at 1,549,907. The lowest mortality was recorded in Paisley, viz, 16.1, and the highest in Greenock, viz, 23.7 a thousand. The aggregate number of deaths registered from all causes was 599, including smallpox, 1; measles, 7; scarlet fever, 11; diphtheria, 6, and whooping cough, 12.

JAMAICA.—Two weeks ended November 13, 1897. Estimated population, 694,865. Total number of deaths not reported. The deaths included 7 from yellow fever.

ST. HELENA.—Three weeks ended October 23, 1897. Estimated population, 3,600. One death. No death from contagious disease.

SWITZERLAND—*Lucerne*.—Month of October, 1897. Estimated population, 23,500. Total deaths, 24. No deaths reported from contagious diseases.
